TECHNICAL PROFILE

Computer Science student with experience supporting automated equipment and production operations. Familiar with troubleshooting equipment issues, collecting and working with data, and assisting engineers and technicians. Comfortable diagnosing software and hardware problems, and leveraging programming skills to automate tasks, analyze data, and generate actionable insights. Interested in automation, process improvement, and optimization.

- Automation/Manufacturing: Equipment operation, troubleshooting, analysis
- Programming/Scripting: Python, SQL, Java, MATLAB
- Tools: Linux/CLI, Git, Excel, Pandas, NumPy
- Systems: Windows, Linux, hardware configuration, basic networking
- Other: Documentation, diagnostics, logging, cross-team communication

EDUCATION

University of Vermont, Burlington, VT

Expected May 2026

Bachelor of Science in Computer Science

GPA: 3.65

Minors: Mathematics, Business Administration

Coursework: Operating Systems, Software Engineering, Databases, Algorithms, Systems, Operations Mgmt, Math Modeling

RELEVANT EXPERIENCE

GlobalFoundries, Essex Junction, VT

May 2025 – Aug 2025

Summer Manufacturing Operator

- Operated and supported automated semiconductor manufacturing tools in a high-volume production environment
- Assisted with equipment checks and basic troubleshooting to minimize downtime and maintain tool uptime
- Performed quality verification tests and documented results for engineering and maintenance teams
- Collaborated with engineers and technicians to diagnose hardware/software failures and restore production
- Followed strict safety and process controls while working directly with manufacturing equipment

Tesla, Peabody, MA

May 2023 – Aug 2023

ADAS Test Operator

- Inspected engineering vehicles before and after testing drives and performed minor troubleshooting or software updates as needed
- Conducted test drives to collect data, observing and documenting vehicle performance and system behavior
- Recorded actions, interventions, and notable observations to support validation testing
- Managed test data and video uploads for engineer review, automating routine file transfers with CLI tools

University of Vermont, Burlington, VT

Jan 2025 – May 2025

Teaching Assistant – Algorithm Design & Analysis

- Evaluated weekly written assignments for correctness, clarity, and logical reasoning
- Assessed biweekly Java programs, providing clear technical documentation and explanations of system behavior

OTHER EXPERIENCE

Matthew Cooper Insurance Agency, Revere, MA

May 2022 – Aug 2024

Customer Service Representative

- Developed new business quotes to meet client needs and provided guidance on policy options
- Managed high-volume client communication while maintaining accurate records and data entry

ENGINEERING PROJECTS

- Built Python scripts to automate routine data collection and validation tasks, reducing manual processing time
- Designed SQL databases to store and track system/process data for analysis and reporting
- Developed lightweight reporting tools to monitor performance trends and identify inefficiencies or issues
